COIN ECOSYSTEM COIN IT-1, COIN IT-2, COIN IT-3

Due to the fact that the previously released two IT coins were vulnerable to attacks through the mechanisms of security holes in the PancakeSwap platform, there was a need to recreate the same logic and economic attractiveness for the end client, but within the framework of complete security, including protection from security holes PancakeSwap platform of each user and his assets from all forms of attacks. By forming an economy divided into three coins, it was possible to seriously increase the financial return from the IT coin ecosystem for each user.

TOKENOMICS

- Coin IT-1 acts as an index
- The IT-2 coin acts as a means of payment
- IT-3 coin acts as a dividend coin

ECONOMIC EXPEDIENCY

The IT-1 coin arrives in the client's wallet in a locked state. When this coin's rate increases, all users possessing the IT-1 Coin in their wallets are automatically credited with the IT-2 Coin, serving as a payment method that can be sold immediately. Consequently, an equivalent amount of the user's IT-1 Coin is burned.

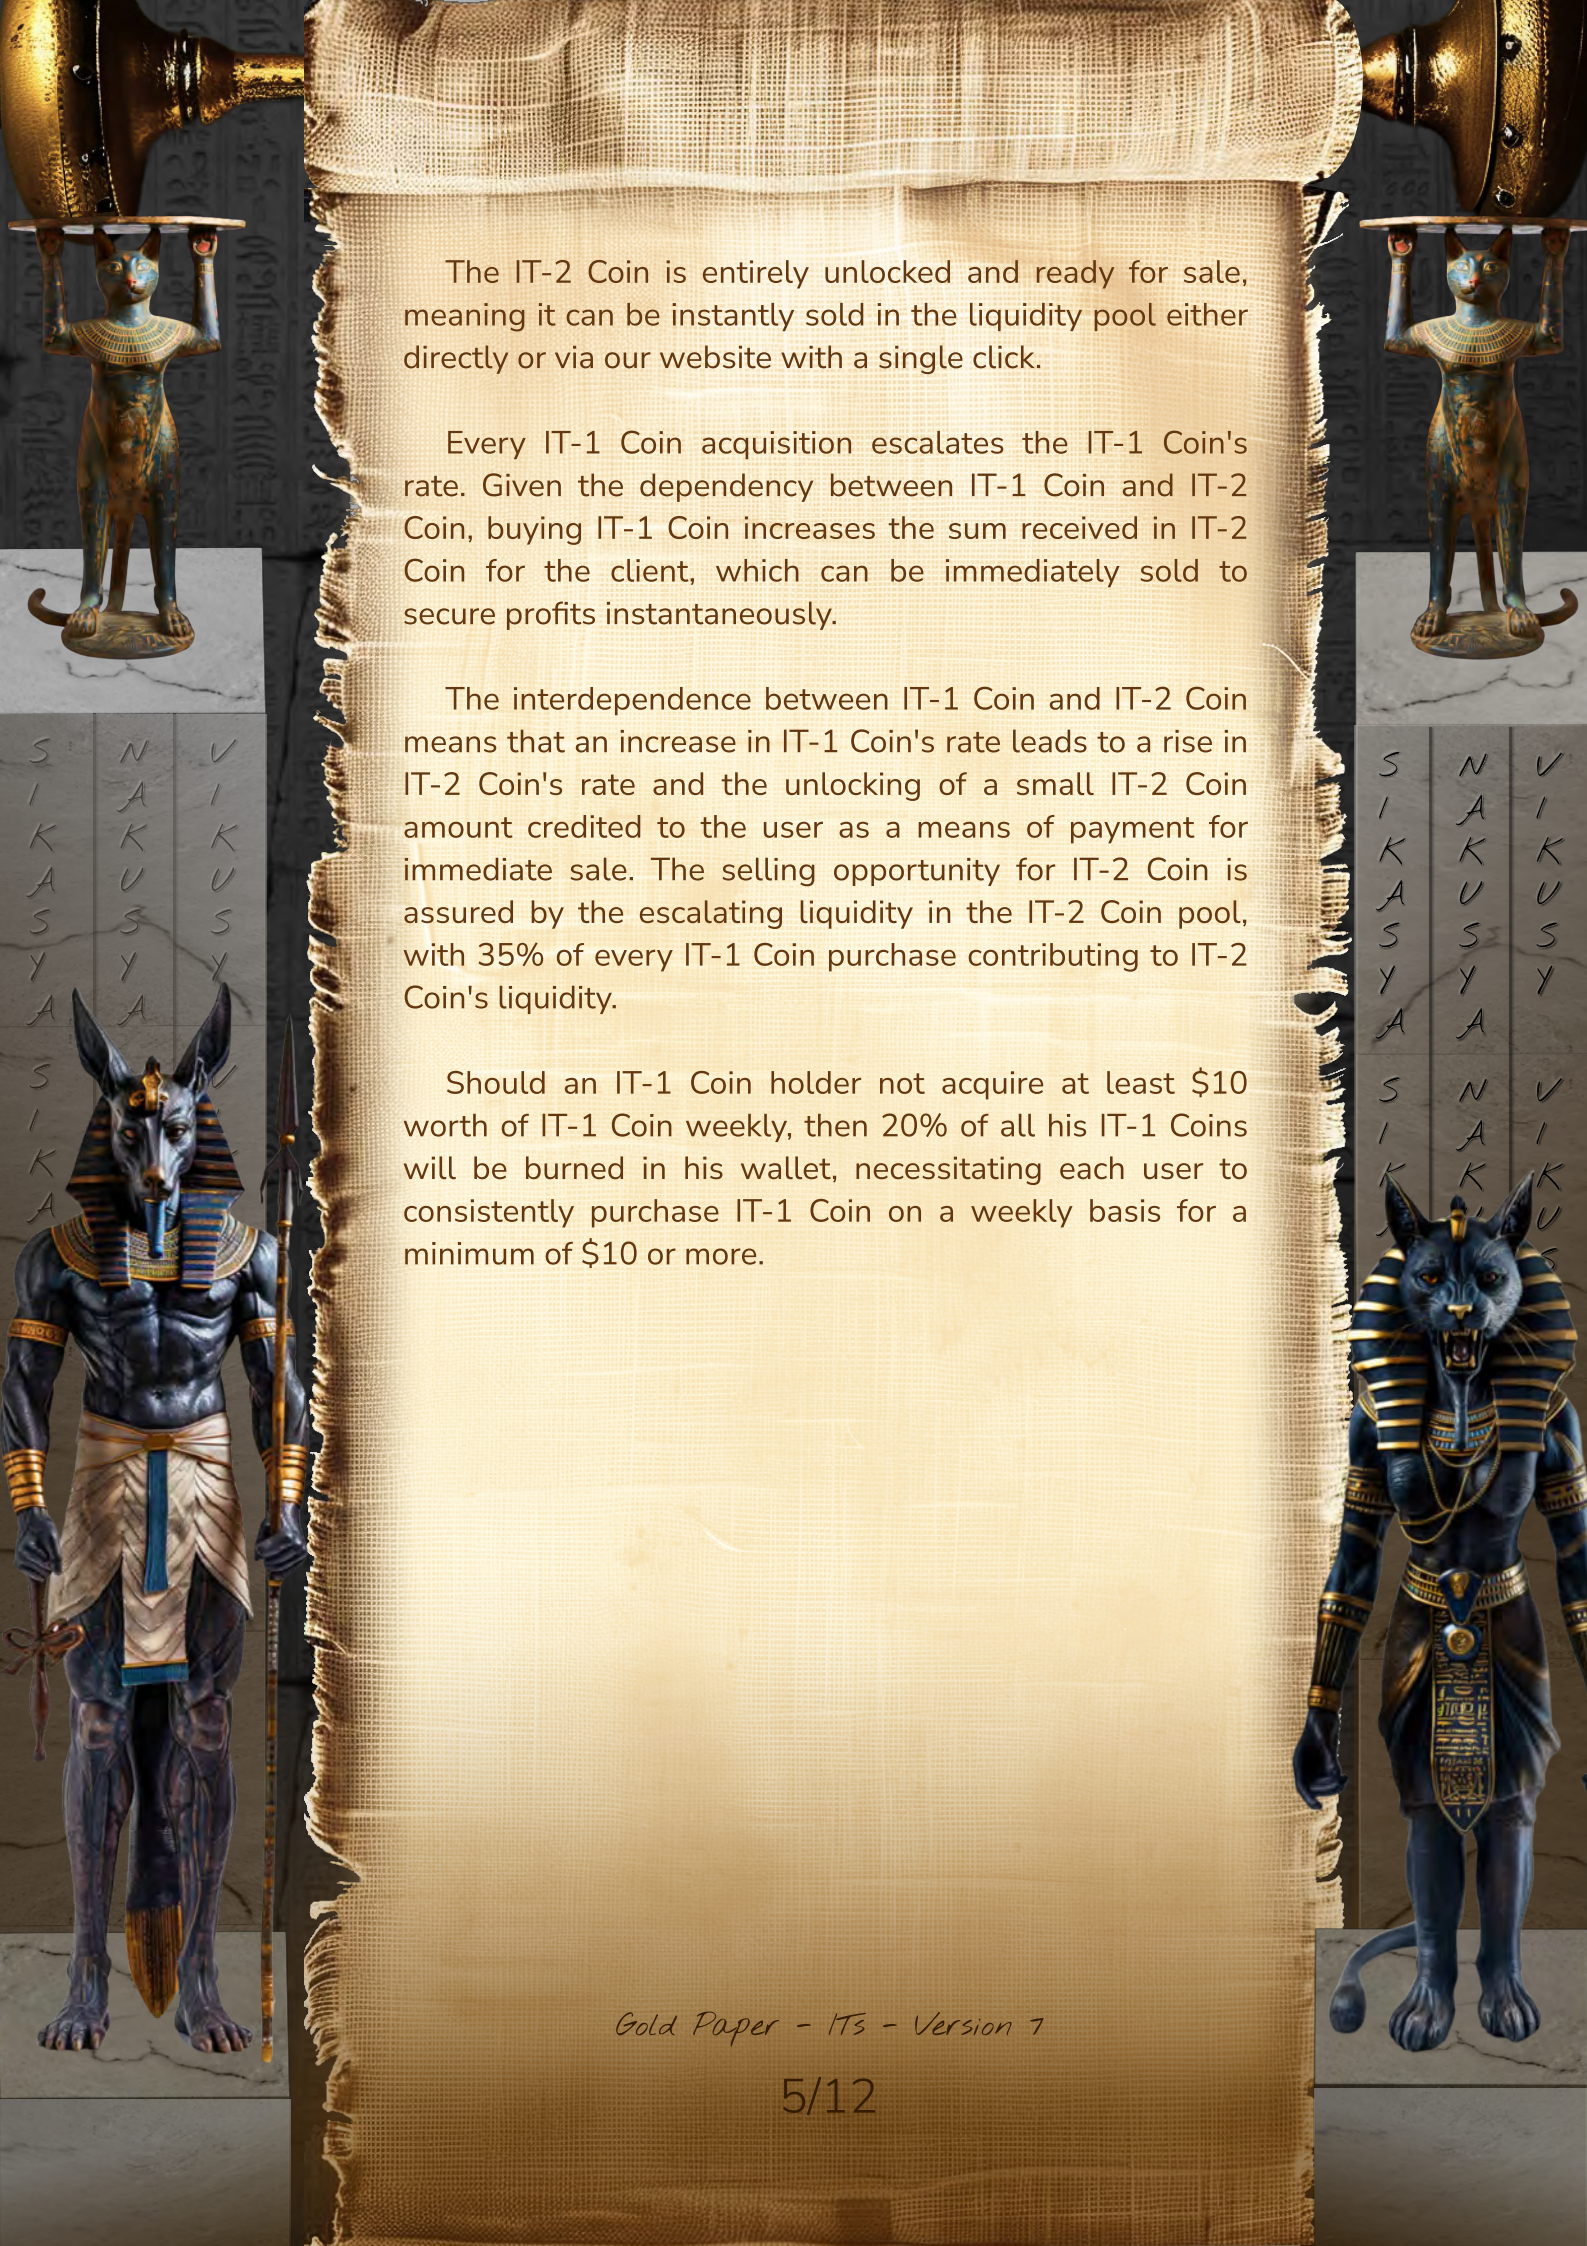

Example: When a user purchased IT-1 Coins for a certain sum, an equivalent amount of IT-2 Coins was unlocked and transferred to his wallet, resulting in the reduction of IT-1 Coin by the amount credited in IT-2 Coin. Thus, the user ends up with fewer IT-1 Coins and more IT-2 Coins. Each IT-1 Coin purchase boosts the IT-2 Coin's rate, turning IT-2 Coin into an asset that appreciates with every IT-1 Coin purchased by anyone.

Liquidity tokens of IT-1 Coin and IT-2 Coin, constituting 20% of each pair, are continually provided as collateral—from every IT-1 Coin purchase to IT-3 Coin. The IT-3 Coin was released in a fixed issuance. The influx of liquidity tokens perpetually augments its value by 20% with every IT-1 Coin purchase, evolving it into a rapidly appreciating asset.

IT-3 Coin can be acquired for a sum equal to one-third of the expenditure on IT-1 Coin. For instance, if you purchased IT-1 Coins worth \$300, you could buy IT-3 Coins for \$100.

Upon purchasing an IT-1 Coin, the buyer's wallet, from which IT-1 Coin was bought, receives not only the IT-1 Coin but also the IT-2 Coin, the primary payment means in the Introspection Tokens coin ecosystem that encompasses all three coins.

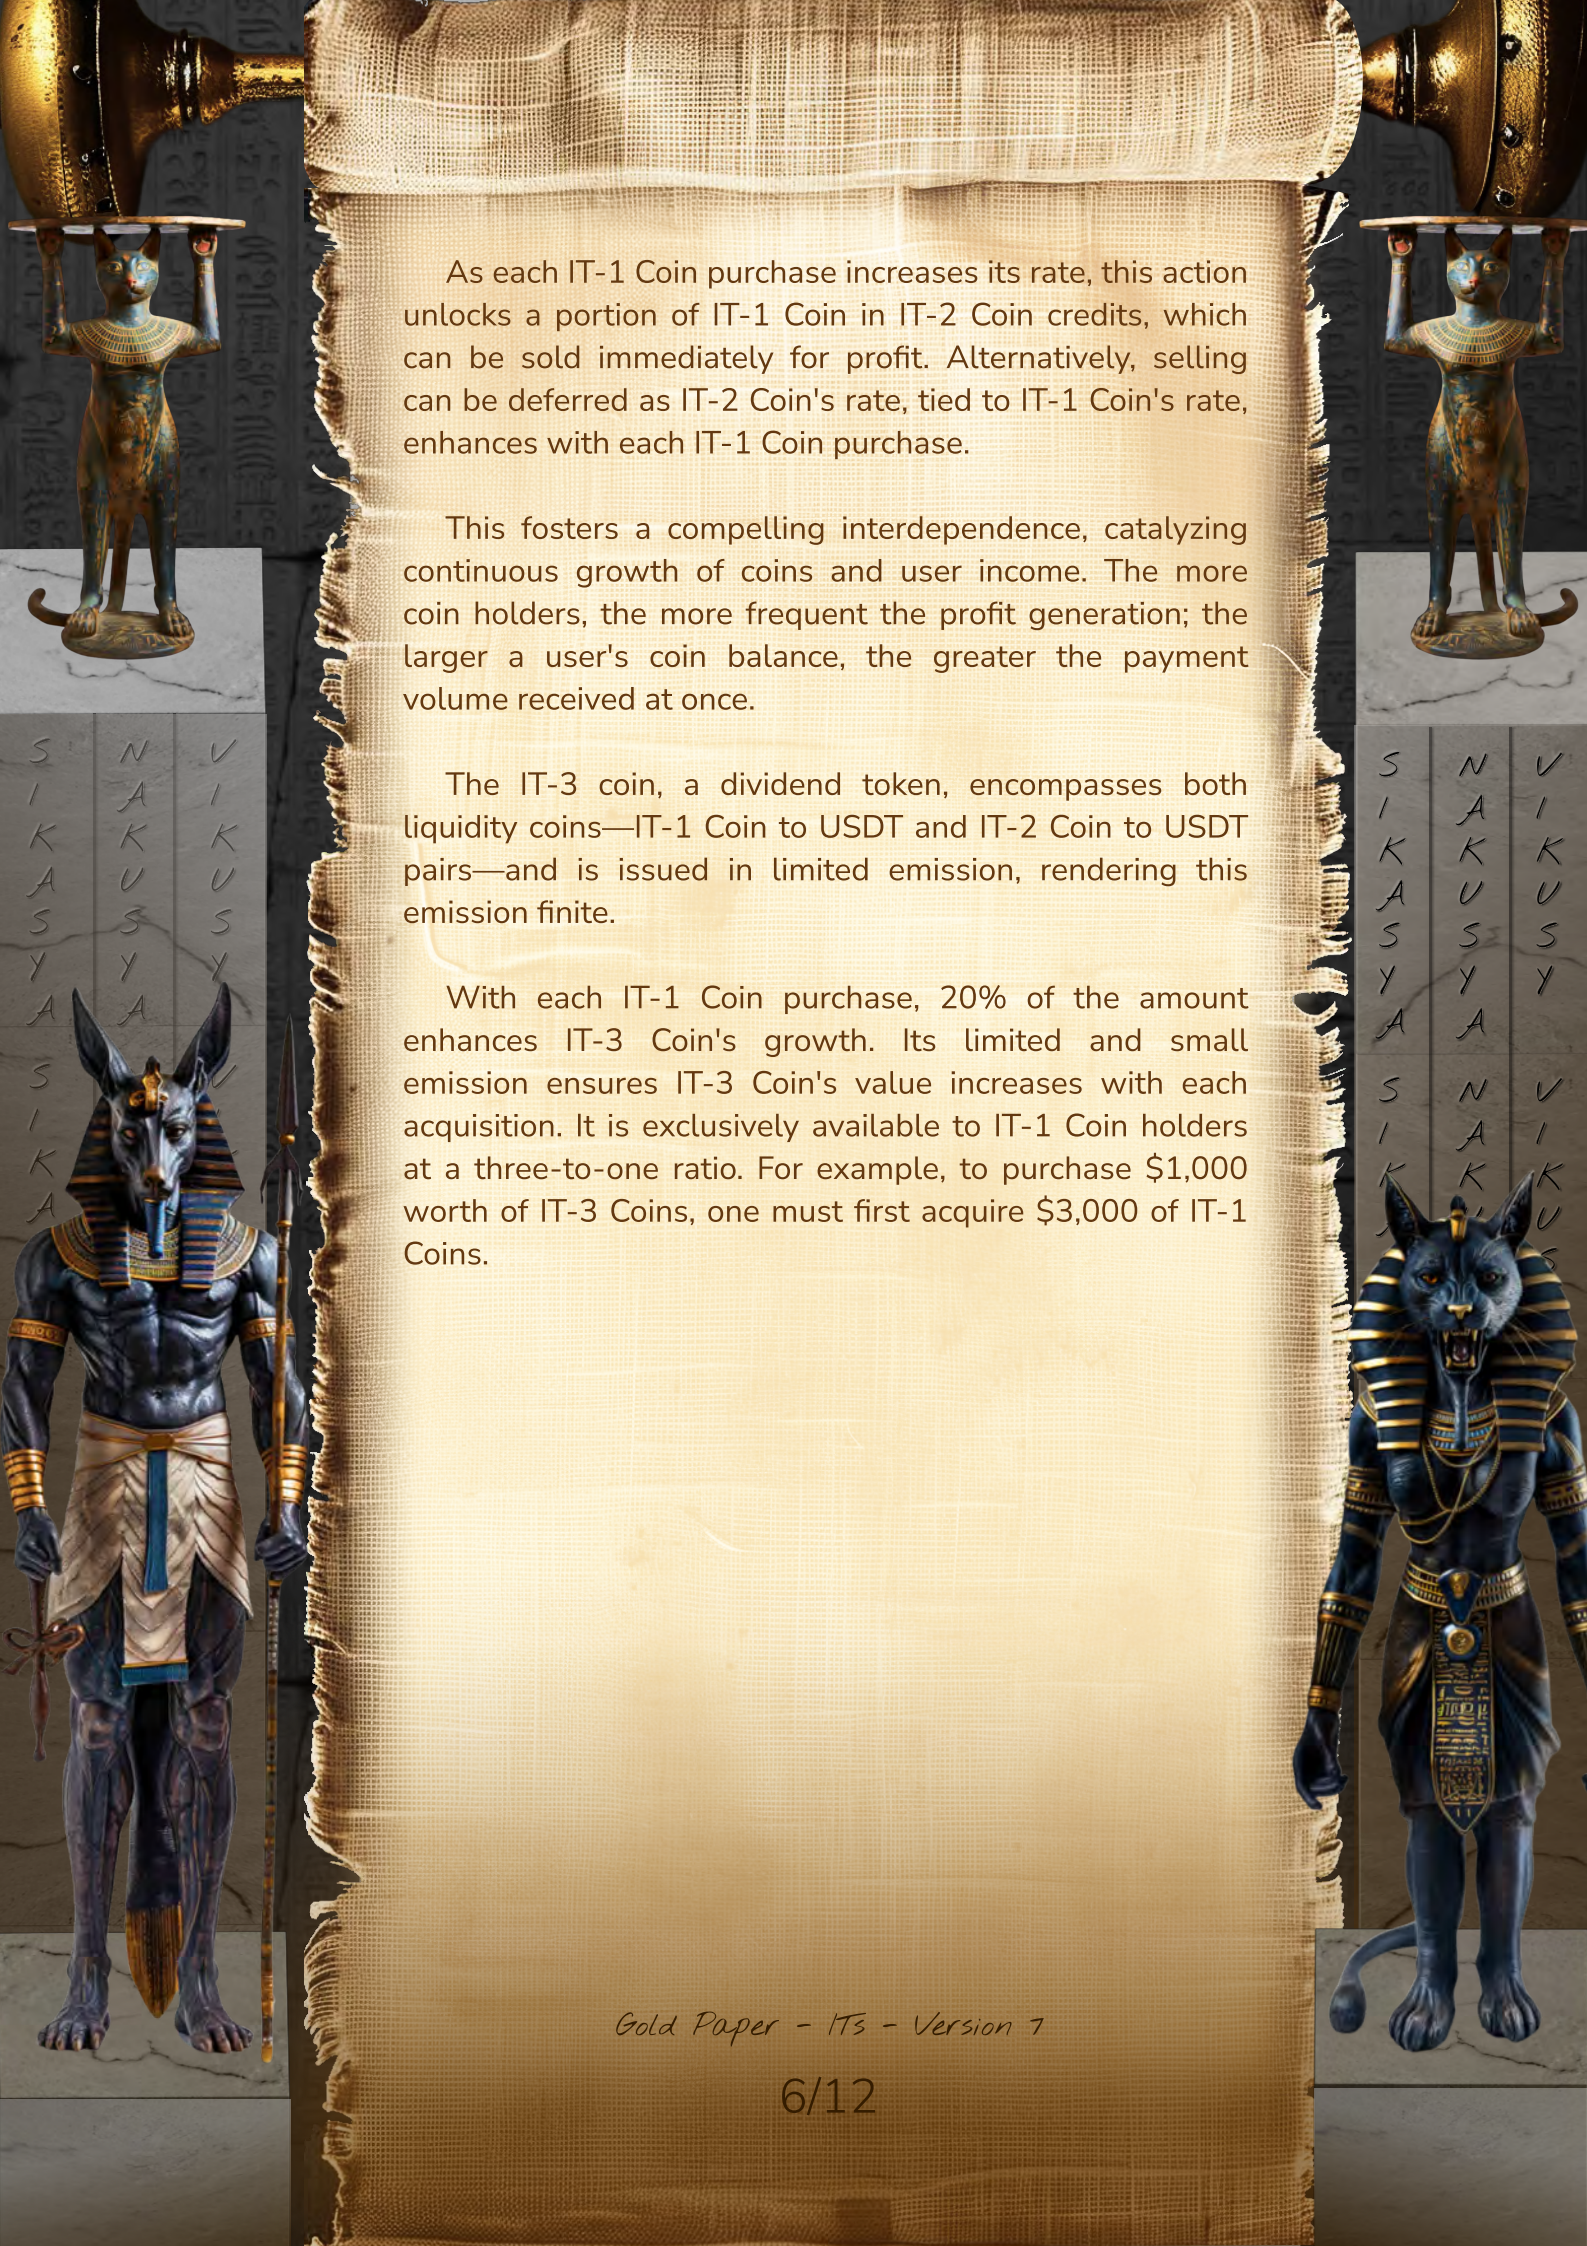

The IT-2 Coin is entirely unlocked and ready for sale, meaning it can be instantly sold in the liquidity pool either directly or via our website with a single click.

Every IT-1 Coin acquisition escalates the IT-1 Coin's rate. Given the dependency between IT-1 Coin and IT-2 Coin, buying IT-1 Coin increases the sum received in IT-2 Coin for the client, which can be immediately sold to secure profits instantaneously.

The interdependence between IT-1 Coin and IT-2 Coin means that an increase in IT-1 Coin's rate leads to a rise in IT-2 Coin's rate and the unlocking of a small IT-2 Coin amount credited to the user as a means of payment for immediate sale. The selling opportunity for IT-2 Coin is assured by the escalating liquidity in the IT-2 Coin pool, with 35% of every IT-1 Coin purchase contributing to IT-2 Coin's liquidity.

Should an IT-1 Coin holder not acquire at least \$10 worth of IT-1 Coin weekly, then 20% of all his IT-1 Coins will be burned in his wallet, necessitating each user to consistently purchase IT-1 Coin on a weekly basis for a minimum of \$10 or more.

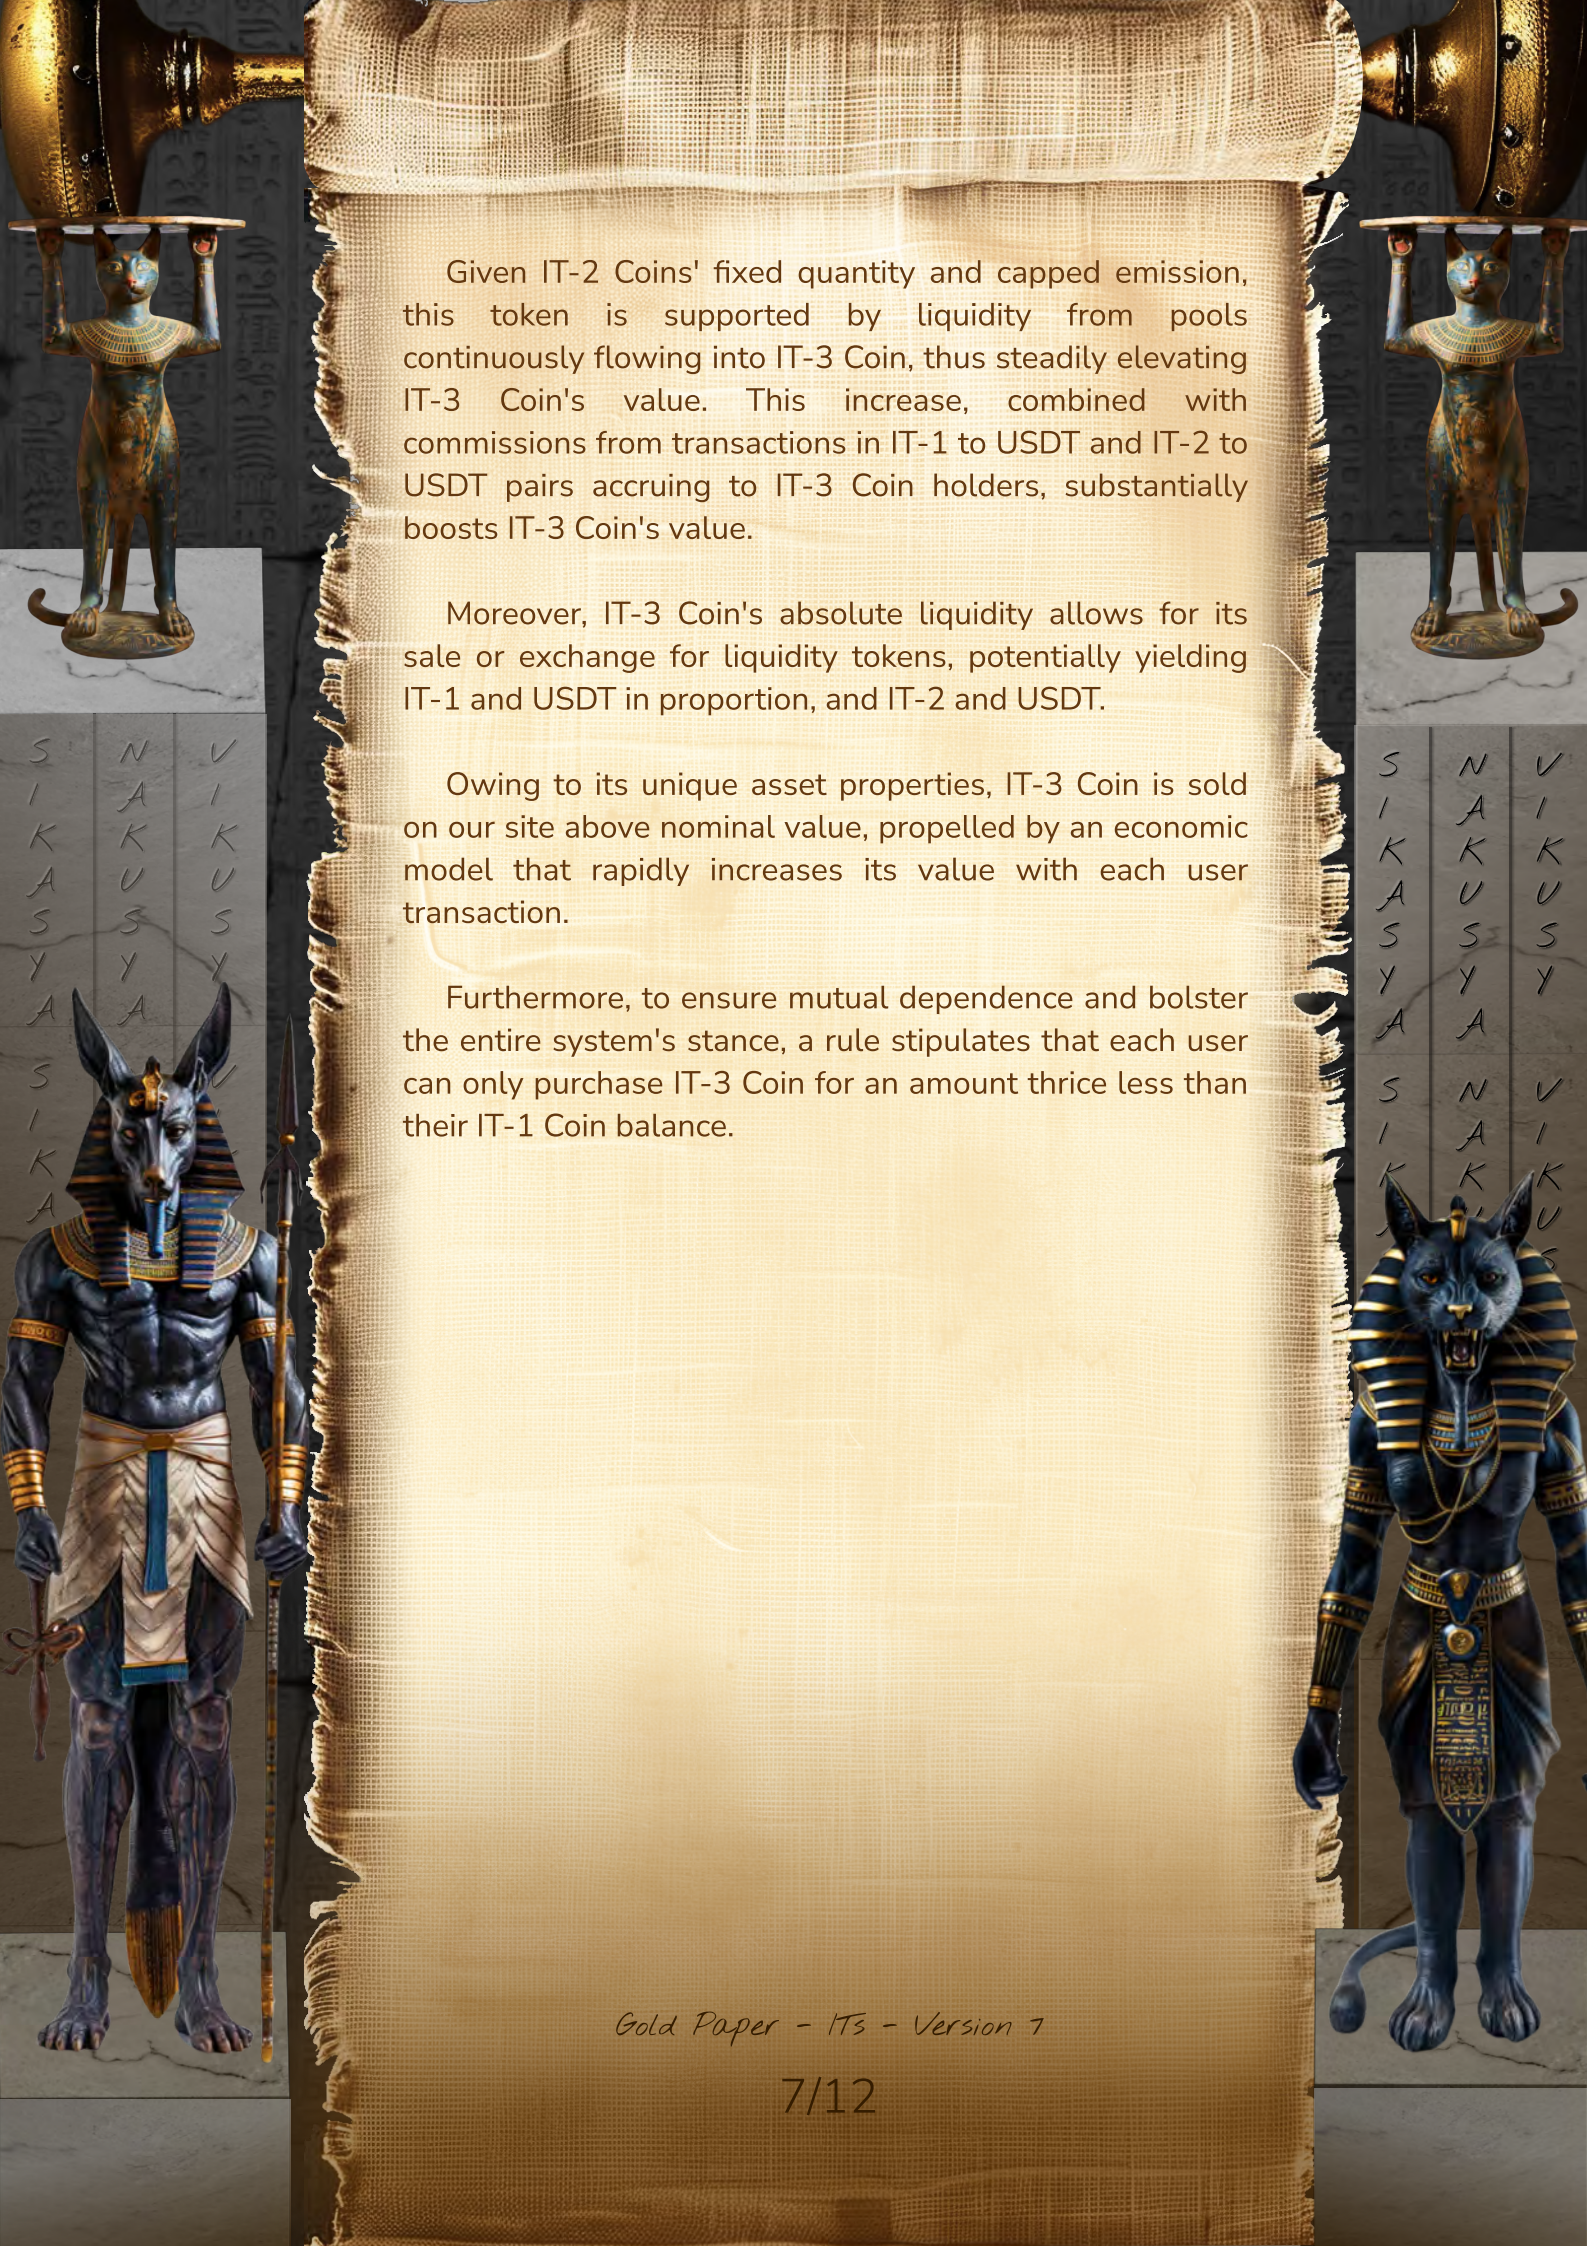

As each IT-1 Coin purchase increases its rate, this action unlocks a portion of IT-1 Coin in IT-2 Coin credits, which can be sold immediately for profit. Alternatively, selling can be deferred as IT-2 Coin's rate, tied to IT-1 Coin's rate, enhances with each IT-1 Coin purchase.

This fosters a compelling interdependence, catalyzing continuous growth of coins and user income. The more coin holders, the more frequent the profit generation; the larger a user's coin balance, the greater the payment volume received at once.

The IT-3 coin, a dividend token, encompasses both liquidity coins—IT-1 Coin to USDT and IT-2 Coin to USDT pairs—and is issued in limited emission, rendering this emission finite.

With each IT-1 Coin purchase, 20% of the amount enhances IT-3 Coin's growth. Its limited and small emission ensures IT-3 Coin's value increases with each acquisition. It is exclusively available to IT-1 Coin holders at a three-to-one ratio. For example, to purchase \$1,000 worth of IT-3 Coins, one must first acquire \$3,000 of IT-1 Coins.

Given IT-2 Coins' fixed quantity and capped emission, this token is supported by liquidity from pools continuously flowing into IT-3 Coin, thus steadily elevating IT-3 Coin's value. This increase, combined with commissions from transactions in IT-1 to USDT and IT-2 to USDT pairs accruing to IT-3 Coin holders, substantially boosts IT-3 Coin's value.

Moreover, IT-3 Coin's absolute liquidity allows for its sale or exchange for liquidity tokens, potentially yielding IT-1 and USDT in proportion, and IT-2 and USDT.

Owing to its unique asset properties, IT-3 Coin is sold on our site above nominal value, propelled by an economic model that rapidly increases its value with each user transaction.

Furthermore, to ensure mutual dependence and bolster the entire system's stance, a rule stipulates that each user can only purchase IT-3 Coin for an amount thrice less than their IT-1 Coin balance.

The monetary system also incorporates a user reward principle for IT-1 Coin purchases: every 3rd, 7th, 17th, 29th, 37th purchase over \$10 triggers a \$4 credit in IT-2 Coin, which can be sold for profit. This reward principle functions independently and continuously.

These adjustments were made to enhance readability and ensure grammatical correctness while maintaining the original text's integrity.

BASIC PRINCIPLES OF TOKENS

Basic principles of Coin IT-1: to be an index of the rate of the entire ecosystem of dependent coins

Basic principles of IT-2 Coins: to be the main means of payment in the ecosystem with dependent coins.

Basic principles of IT-3 Coin: to be a dividend coin with ultra-high potential for growth of its own rate.

TOKEN MISSION AND CREATION GOALS

In the modern world, the very purpose of cryptocurrencies has started to blur, and the principle of seeking a 'greater fool' in pyramids and bubbles has become predominant in the market, diminishing the broader audience's interest in cryptocurrency.

Due to the complete absence of regulatory principles in the cryptocurrency market, uncontrolled chaos has ensued, posing high risks for clients.

At the same time, the regulatory system itself, based on the application of laws from various countries and individual opinions, has also discredited itself repeatedly in all countries without exception. This, combined with the tightening of the banking system, has encouraged people to delve deeper into cryptocurrencies.

Our goal is simple: to create a token regulated by rules, a formula, and an algorithm, rather than by any individual. By making its operation ultimately independent, even from us as its developers and creators, we provide people with a tool that safeguards them against unfair play, human error, and economic risks.

Thanks to the principles, rules, interdependencies, and algorithms embedded in the token system, the user is protected, as are their investments, from all the risks outlined above. And the economic incentive built into the coin ecosystem is more than intriguing, especially if the investor's goal is to secure a meaningful, safe, and growing income.

WAYS TO IMPLEMENT THE TASKS OF EACH TOKEN

IT-1 Coin Task: Serving as the Index for the monetary system.

This is ensured by the coin being fully locked in the user's wallet; it partially burns in accordance with the user's actions, thereby generating profit for the user in IT-2 Coin.

IT-2 Coin Task: Acting as a smart payment method for the user.

This is guaranteed by the distribution of funds received from selling IT-1 Coin, creating infallible liquidity for IT-2 Coin.

IT-3 Coin Task: Functioning as a dividend coin.

This is secured by allocating 20% from each purchase of IT-1 Coin into the liquidity of IT-3 Coin through a mechanism of boosting with liquidity tokens from coins 1 and 2.

Also, by the fact that IT-3 Coin can only be purchased adhering to a one-to-three rule, and its issuance is limited and small, with liquidity tokens pouring in with every transaction, progressively increasing the rate.

Additionally, upon selling IT-3 Coin, it burns.

DISTRIBUTION OF FUNDS

- Coin IT-1: 25%
- Coin IT-2: 35%
- Coin IT-3: 20%
- Implementation of the principle of distributing prizes to users according to the order of their payments: 10%
- Affiliate program: 5%
- Development team: 5%
